

## Aprendizaje Automático – Verificación del despliegue en Streamlit

Carmen Peláez Martín - 100522094@alumnos.uc3m.es

Ana Sanz del Collado - 100522234@alumnos.uc3m.es

A continuación se demuestra que las predicciones del modelo coinciden con las de la aplicación web para dos clientes de ejemplo.

### Cliente 1 - Notebook

```
[104]
✓ 0 s
print(X_train.iloc[0])
print("\nPredicción cliente 1:", mejor_modelo_final.predict(X_train.iloc[[0]])[0])
```

```
... age 36
job management
marital married
education tertiary
default no
balance 393
housing yes
loan no
contact cellular
day 30
month apr
duration 555
campaign 2
previous 0
poutcome unknown
was_previously_contacted 0
pdays_clean 0
Name: 1719, dtype: object

Predicción cliente 1: yes
```

### Cliente 1 - Streamlit

#### Resumen de los datos del cliente:

|   | age | job     | marital | education | default | balance | housing | loan | contact  | day | month |
|---|-----|---------|---------|-----------|---------|---------|---------|------|----------|-----|-------|
| 0 | 36  | manager | married | tertiary  | no      | 393     | yes     | no   | cellular | 30  | apr   |

Predecir

El cliente Sí suscribirá el depósito

## Ciente 2 - Notebook

```
[105] print(X_train.iloc[1])
✓ 0 s print("\nPredicción cliente 2:", mejor_modelo_final.predict(X_train.iloc[[1]])[0])
```
